

**Graduate student position available at Simon Fraser University  
(near Vancouver, Canada)**

**Dr. Julian Christians' lab, Department of Biological Sciences**

I am seeking a self-motivated and enthusiastic individual for a graduate student position (M.Sc. or Ph.D. level) to start in September 2012, or as soon as a suitable candidate is found. Research will focus on a gene influencing bone physiology and postnatal growth. Specifically, this work will take advantage of a unique conditional knock-out mouse model to examine the physiological roles of PAPPA2, a protease of an insulin-like growth factor binding protein.

If you are interested in this position, please send me ([julian\\_christians@sfu.ca](mailto:julian_christians@sfu.ca)) (1) a copy of your CV (which should include a short description of past laboratory/research experience and a brief statement of your career goals. Contact information for references is also desirable) and (2) a copy of your post-secondary transcripts (unofficial electronic copies are acceptable).
